

# Health of Children and Young People Newport

In 2011, there were approximately 47,400 children and young people aged 0 to 24 years resident in Newport. This accounts for 32.5% of the area's population, which is above the all-Wales average of 30.3%.

Every child and young person has the right to be happy, healthy and safe. Any consideration of the child must also take account of the family, whose role is paramount.

In Wales:

- the majority of children and young people in Wales are healthy and satisfied with their lives
- one in five of those aged 0-19 years live in poverty
- only around half of newborn babies are breastfed
- many older children still remain susceptible to vaccine preventable diseases such as measles
- more than a quarter of 16-24 year olds smoke

Coordinated interagency action at national and local level is required to improve the health of children and young people and its determinants. Working with children and families is essential to build on assets and address needs.

This local authority profile should be read in conjunction with the report entitled *Health of children and young people in Wales* and its supporting technical guide which can both be accessed via the Observatory's website at:
