

Staphylococcus aureus Blood Stream Infection (Bacteraemia)
Surveillance

All Wales Data per 100 000 Bed Days

Rates of *Staphylococcus aureus* Blood Stream Infections per 100 000 bed days

For the *Staphylococcus aureus* blood stream infection (bacteraemia) surveillance scheme, rates produced for reports have historically used 1000 bed days as the standard comparison denominator. However, the Top Ten Blood Stream Infection (bacteraemia) surveillance uses 100 000 bed days as the standard comparison denominator. To allow comparisons between the two schemes, the *Staph. aureus* data published for each Health Board has been recalculated to be per 100 000 bed days. However to allow comparison with the English scheme, which is presented per 10,000 bed days please divide the Welsh figures by 10.

All Wales Statistical Process Control Charts for Rates of *S. aureus* Blood Stream Infections per 100 000 Bed Days

Data from the *Staphylococcus aureus* blood stream infection (bacteraemia) surveillance are used to produce statistical process control (SPC) charts. These compare a Health Board's rate of infection with calculated upper and lower control limits, which allow natural variation in rates to be distinguished from situations where something unusual is occurring. SPC charts are used to compare rates within a Health Board over time and between equivalent Health Boards at a given point in time. Health Boards are asked to investigate if their rates fall outside the control limits of the SPC charts. More information about the statistical analyses performed on the *Staph. aureus* data and what the results mean is provided in the section on the *Staph. aureus* Blood Stream Infections surveillance scheme.

SPC Chart for Quarterly *S. aureus* Blood Stream (Bacteraemia) Rates: 01/04/01 – 30/09/10

SPC Chart for Quarterly MSSA Blood Stream (Bacteraemia) Rates: 01/04/01 – 30/09/10

SPC Chart for Quarterly MRSA Blood Stream (Bacteraemia) Rates: 01/04/01 – 30/09/10
