

Staphylococcus aureus Blood Stream Infection (Bacteraemia)
Surveillance

All Wales Data per 100,000 Bed Days

Commentary

- Data have been received from all Health Boards in Wales.
- Surveillance started in Powys Local Health Board in April 11. Powys data has been included in the aggregate and trend from this date.
- SPC charts have been provided for all Health Boards except Betsi Cadwaladr University Health Board and Powys Health Board; data is currently not available for a sufficient period for these sites.
- Data for the year up to 30/09/12 show that 876 *Staphylococcus aureus* bacteraemias were reported (increased from 843 the year up to 30/09/11) and the overall rate of *Staphylococcus aureus* bacteraemias in Wales was 24 per 100,000 bed days. This rate is higher than for the year up to 30/09/11 (23 per 100,000 bed days).
- 195 MRSA bacteraemias were reported for the year up to 30/09/12 (increased from 192 the year up to 30/09/11). The MRSA rate for the year up to 30/09/12 in Wales was 5 per 100,000 bed days. This is the same as for the year up to 30/09/11.
- 681 MSSA bacteraemias were reported for the year up to 30/09/2012 (increased from 651 the year up to 30/09/2011). The MSSA rate for the year up to 30/09/12 in Wales was 19 per 100,000 bed days. This rate is higher than for the year up to 30/09/11 (18 per 100,000 bed days).
- SPC charts use upper and lower control limits to indicate the range in rates that would be expected as a result of natural variation. These control limits can be reset when there has been a significant change in the data. Because of the reduction in the rates of MRSA bacteraemia in Wales over time the control limits have been reset to reflect these lower rates. The markers that have been used to identify significant changes in rates are 8 consecutive points below the overall centre line or 12/14 consecutive points below the overall centre line. For Wales as a whole for MRSA bacteraemias the split was made from the Oct to Dec 08 quarter and then because of further reductions another split from Jul to Sep 10. For individual Health Boards and hospitals splits have been made according to when either of the criteria has been met. For some sites no splits have been made, but splits will be made in the future if either criterion has been met.

Rates of *Staphylococcus aureus* Blood Stream Infections per 100,000 bed days

For the *Staphylococcus aureus* blood stream infection (bacteraemia) surveillance scheme, rates produced for reports have historically used 1,000 bed days as the standard comparison denominator. However, the Top Ten Blood Stream Infection (bacteraemia) surveillance uses 100,000 bed days as the standard comparison denominator. To allow comparisons between the two schemes, the *S. aureus* data published for each Health Board has been recalculated to be per 100,000 bed days. However to allow comparison with the English scheme, which is presented per 10,000 bed days please divide the Welsh figures by 10.

* Powys Teaching Health Board figures are included in the all Wales quarterly trend data from April 2011.

All Wales Statistical Process Control Charts for Rates of *S. aureus* Blood Stream Infections per 100,000 Bed Days

Data from the *Staphylococcus aureus* blood stream infection (bacteraemia) surveillance are used to produce statistical process control (SPC) charts. These compare a Health Board's rate of infection with calculated upper and lower control limits, which allow natural variation in rates to be distinguished from situations where something unusual is occurring. SPC charts are used to compare rates within a Health Board over time and between equivalent Health Boards at a given point in time. Health Boards are asked to investigate if their rates fall outside the control limits of the SPC charts. More information about the statistical analyses performed on the *S. aureus* data and what the results mean is provided in the section on the *S. aureus* Blood Stream Infections surveillance scheme.

The reductions in MRSA in Wales have resulted in the control limits being recalculated for the SPC charts. The new control limits have been put in place for Wales as a whole from January 2008. Because of the recalculated control limits it is no longer possible to provide the 1 and 2 SD lines on the control charts.

SPC Chart for Quarterly *S. aureus* Blood Stream (Bacteraemia) Rates: 01/04/01 – 30/09/12

SPC Chart for Quarterly MSSA Blood Stream (Bacteraemia) Rates: 01/04/01 – 30/09/12

All Wales quarterly MSSA bacteraemia rates per 100,000 bed days, 01/04/01 - 30/09/12

SPC Chart for Quarterly MRSA Blood Stream (Bacteraemia) Rates: 01/04/01 – 30/09/12

All Wales quarterly MRSA bacteraemia rates per 100,000 bed days, 01/04/01 - 30/09/12
